

## Wyoming State Hospital

Evanston, Wyoming

The Wyoming State Hospital project in Evanston consolidates civil and forensic inpatient units, administration, and support services that were spread throughout an existing campus into a single building.

The project will provide three 24-bed acute adult units and 32 forensic beds arranged in 4-bed and 6-bed subunits for maximum flexibility. New treatment spaces, outdoor recreation areas, and central support functions all contribute to increased operational efficiency and a therapeutic healing environment. Phased construction will allow existing beds to be relocated into new construction with subsequent renovations to the existing inpatient building for administrative and support functions.

Construction is expected to be complete in the Spring of 2020.
