

Bronx Psychiatric Center Redevelopment

New York, New York

architecture+ provided programming, planning, and design services as a key member of the Master Architect-Engineer team responsible for the development of a new integrated 500-bed replacement hospital. The new facility will be comprised of 120 transitional living beds, 78 child and adolescent beds, and 300 adult inpatient beds.

We will also be responsible for the development of construction and systems standards for the project and will act as compliance architects for the efforts undertaken by individual building A/E's. The total project budget for all work is approximately \$350 million dollars.

architecture+ and the Spector Group, Associated Architects
