

JFK Airport Newsstand and Gift Shops

Jamaica, New York

We designed four retail stores for the airport's newly constructed Terminal One. The project integrates the latest internet technology with contemporary retail interiors. The design evokes an urban theme while alluding to the curvilinear structure and organization of the building. Abstract elements of a city grid, billboard, glass tower and lighting work together to create a stimulating retail environment.

Billboards, towers, gondolas, service counters and internet kiosks are designed as abstractions of the urban built environment and are arranged to create visual and bodily movement into and throughout each store.
