## McKinstry Building Renovations The Sage Colleges

Troy, New York

architecture+ designed renovations to convert the ground and first floors of the 1950's era McKinstry Residence Hall into a fitness and student activity center. We transformed the former ground floor lounge space into a fitness center with state-of-the-art mechanical systems and modern lighting. We transformed the former first floor residential wing to house offices for student clubs and student life, student lounges, games rooms, and performance spaces. An elevator was added in the lobby to provide accessibility to all floors.

The project also included upgrading the building envelope with an aluminum store front glazing system and redesigning the entrance to include limestone cladding. architecture+ designed all of the finishes for the furniture, fixtures, and equipment on this project.
